Installation guide: Research project

Pieter Specenier

Inhoudsopgave
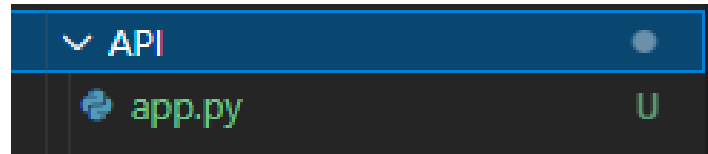

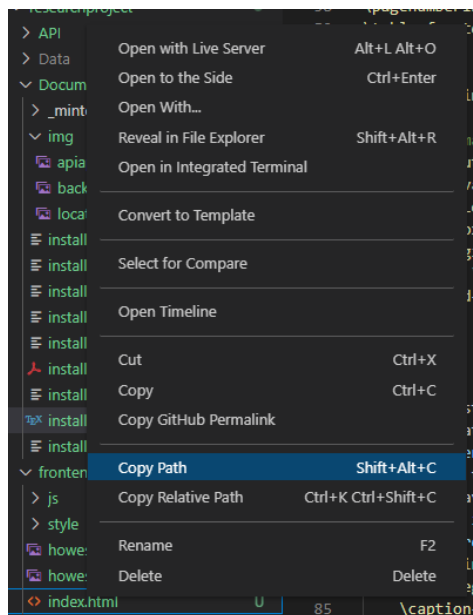

1 Installation

The installation of the software is done by the following steps:

1. Clone the github repository on to your computer through this link on my github.

2. Now navigate to the cloned repository and run the following command: pip install -r requirements.txt

3. After installing all the requirements you can now run the app.py file, located in the API folder.

Figuur 1: API app file location

4. After making sure the app is up and running you can now access the API through the following link: C:/Users/USERNAME/Documents/GitHub/Researchproject2022/researchproject/frontend/index.html

5. You can also find this link by clicking on the copy path button and pasting it into your browser.

Figuur 2: How to get to website of API

6. If every worked according to plan you should now have the following website in front of you

Figuur 3: View of the website

7. Have fun with the API!
